

DATASHEET

BloxOne® DDI

Simple, Reliable and Flexible Core Network Services for the Expanding Distributed Enterprise

KEY CAPABILITIES

Centralized Operations

Cloud-managed interface for automated DNS, DHCP and IP address management, and policy control across multiple locations.

Flexible Packaging

Available as both physical and virtual deployment options, with subscription based pricing.

Enhanced End-User Experience

Local DNS resolution to ensure all traffic goes to the closest application endpoints.

Local Survivability

DNS and DHCP services so business operations can continue with minimal or no downtime if disaster occurs and WAN services are disrupted.

Improved Reliability

DHCP instance pairing with automatic failover available for each site for seamless, uninterrupted operations.

The Challenge

Business and workplace transformation initiatives are expanding across organizations worldwide. They are driven primarily by rapid increases in mobility, IoT and the cloud, which have changed not only expectations but also the way business is done.

Mobile devices are a significant part of daily life. Anywhere, anytime access is now an absolute requirement. IoT growth in surveillance, manufacturing, healthcare and smart offices continues to expand. And business-critical applications and services are rapidly shifting to cloud-based alternatives like Salesforce, Microsoft 365 and Dropbox.

As a result, networks are expanding, primarily at the edge where the number of distributed locations and the devices within them are increasing exponentially. Additionally, users are demanding greater access, faster response times and more reliable connections to critical business applications and services.

These trends and the expectations behind them are pressing organizations to rethink their processes and deployment models to improve the level and quality of services they deliver. However, many lack the time or resources to evaluate and implement these improvements. As a consequence, vital tools for success now must include comprehensive solutions that are easy to deploy and optimized to improve access, availability and performance in distributed environments.

The Solution

Infoblox, the industry leader in DNS, DHCP and IP address management (DDI), is the first to market with a cloud-managed solution for these critical network services. BloxOne DDI centralizes the provisioning, management and administration of DDI for enterprises with distributed environments.

Mobile, IoT and cloud solutions are sensitive to latency and depend heavily on reliable DDI infrastructures. BloxOne DDI consolidates the visibility, administration and control of distributed locations into a single interface, directs traffic to the closest SaaS entry point to improve application performance and ensures survivability of distributed locations in the event of lost connections to data centers.

BloxOne DDI also utilizes DNS server group and access control list (ACL) templates and leverages an extensible microservices and container-based platform to simplify deployments, streamline operations and minimize overall total cost of ownership. A full complement of APIs is also available for secure, programmatic access to supported features throughout the solution.

Key Features

Real-Time Service Monitoring Widgets

Provides status and usage for DNS query responses, DNS queries & DHCP leases per second.

DNS & DHCP Activity & Status Reporting

Includes trend reporting of DNS queries per second, activity and responses and DHCP clients and DHCP leases reports.

DevOps Automation with Ansible

Ansible automation is now supported for DNS, DHCP and IPAM operations. Modules and sample playbooks are also available on the InfobloxOpen GitHub.

DHCP Resiliency & High Availability

Replaces one-to-one relationships by allowing multiple DHCP servers to use a single DHCP hub for redundancy.

DNS, DHCP & IPAM Objects Between IP Spaces

Ability to import / export DNS, DHCP and IPAM objects to simplify migrations from external sources, including 3rd party systems.

BloxOne DDI Licensing

BloxOne DDI for internal services is licensed by the number of active IP addresses and the number of instances deployed. Licensing also includes a DNS query threshold based on the number of IP addresses licensed. External DNS is licensed as a separate SKU by QPS or number of external zones.

BloxOne DDI Product Details

Component Name	Pricing Model	Description
BloxOne DDI Essentials	Per License	<ul style="list-style-type: none">• Entry-level DNS, DHCP, IP address management and NGC
BloxOne DDI Business	Per License	<ul style="list-style-type: none">• Core features for DDI across distributed environments
BloxOne DDI Advanced	Per License	<ul style="list-style-type: none">• Full function DDI with advanced features
BloxOne Appliance	Per Unit	<ul style="list-style-type: none">• Optional physical appliance

Each license entitlement adds 500 QPS and 5 LPS. For higher performance, multiple licenses are required. BloxOne DDI software runs on any commercial off-the-shelf hardware with the specifications defined in the [BloxOne On-Prem Host Options Datasheet](#).

Infoblox is the leader in modern, cloud-first networking and security services. Through extensive integrations, its solutions empower organizations to realize the full advantages of cloud networking today, while maximizing their existing infrastructure investments. Infoblox has over 12,000 customers, including 70 percent of the Fortune 500.
